Pain relief without medication – thanks to targeted muscle stimulation.

Pain relief, muscle stimulation and relaxation.

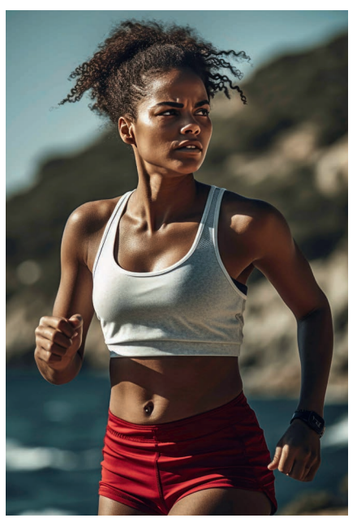

Electrostimulation provides a holistic approach to caring for your body. **TENS relieves pain** in the back, joints, shoulders, neck, thighs and lower legs. **EMS helps to build up muscle** and strengthen your body during a workout. What's more, the **massage function** promotes **relaxation and recovery** after exercising. This form of self-treatment is a safe and effective way to achieve your health and fitness goals.

No matter what you need, we offer the right product for you – from TENS and EMS to combined TENS/EMS devices.

The electrodes can be applied safely to many parts of the body. They generate electrical pulses that are sent through the skin to nerves and muscles. These pulses are often felt as tingling or gentle muscle contractions. Electrostimulation treatment provided by TENS/EMS devices activates the body's own anti-pain mechanisms, which makes it ideal for natural pain therapy.
