GEA®

A rollator is sometimes called a "wheeled walker" but is different from a 2-wheeled walker. It consists of a frame with three or four large wheels, handlebars, and a built-in seat. It is mainly used for patients who need a walker only for balance but not for weight-bearing.

ROL 965AL

ROLLATOR

- **2in1 rollator + wheel chair**
- Individual user needs
- Folds for easy storage and transportation
- Supplied with four wheels
- Lightweight Aluminium construction

OUTER DIMENSION (mm)
- Length _____ 640
