OXYGEN REGULATOR

An oxygen regulator is a medical device that delivers oxygen to a patient through a mask or nasal cannula. It can be used to humidify oxygen treatments and to treat or manage various conditions, including asthma, bronchitis, and chronic obstructive pulmonary disease (COPD).

RANGE :

Oxygen flow	:	1~15 L/Min
Output Pressure	:	2 Bar - 3 Bar
Input Pressure	:	< 150 Bar
Control Pressure of Safety Valve	:	3.5±0.5 Bar
