STETHOSCOPES FOR PHYSICIANS

CHILD

ERKA. FINESSE 2 CHILD

THE UNIVERSAL GENIUS

The universally applicable paediatric stethoscope is highly versatile and offers outstanding acoustics.

The reversible, combined chest-piece has two membrane sides, each making the full frequency range perfectly audible. The larger membrane is suitable for auscultation of children or thin patients, the smaller membrane for infants and small children.

USER GROUPS :
Specialists in infant medicine, paediatricians

1. The pre-tensioned ERKA. convex membrane provides excellent resonance and sound transmission.
2. The non-chill ring attached to each unit ensures the highest level of patient comfort.
3. Highly polished and chromium-plated for a non-porous surface, the brass chest-piece ensures perfect surface hygiene.
4. Two internal channels run parallel in the stethoscope tubing. This prevents the friction noises caused by two separate tubes.
5. Through the separately integrated spring in the tube, there is no acoustic loss from the chest-piece to the ear.
6. The ergonomically designed, super soft ear tips create an excellent acoustic seal against external noise interference and maximize wearercomfort and fit.
7. The standard 15° inclined binurals can be individually adapted to the ear canal characteristics of the user.

REPLACEMENT PARTS

EAR TIPS	EAR TIP SOFT	EAR TIP SUPERSOFT
NON-CHILL RINGS	NON-CHILL RING CHILD	NON-CHILL RING INFANT
