Features

- Intelliwrap Cuff
- 30 Memory
- Irregular Heartbeat Detection
- Cuff Wrap Guide
- Clinically Validated

Measurement Posture Guide For Accurate Blood Pressure Reading

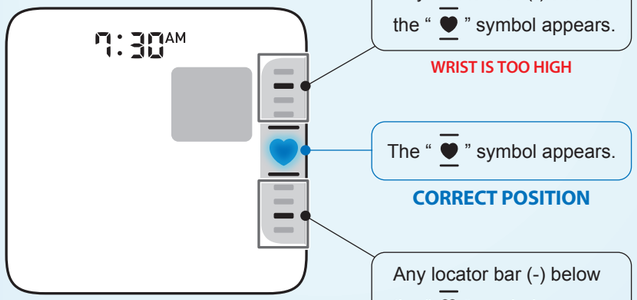

1 Sit in a chair with your legs uncrossed, your feet flat on the floor with your back and wrist comfortably supported.

2 The Measurement Posture Guide will help ensure your arm is at the correct position.

The built-in sensor determine if your monitor is placed at the correct height. A wrong placement due to human error at home, higher or lower, leads to artificially wrong measurement. Only when your wrist placed correctly, the Measurement Posture Guide sensor will activate air inflation for blood pressure reading, ensure ultimate accuracy and precision.

Positioning Indicator is available on the HEM-6181 and HEM-6232T.

3 Relax your wrist and hand. Do not clench or bend your wrist forward or backward.
